

# REBUILDING I-93 SALEM TO MANCHESTER

## 13933A: I-93 NB & SB MAINLINE, STATE LINE TO EXIT 1

**PROJECT OVERVIEW:** Project 13933A will reconstruct and widen nearly two miles of I-93 starting at the Massachusetts State Line and proceeding northerly towards Exit 1. The majority of the widening is to accommodate a future fourth lane connection to I-93 in Massachusetts, if a fourth lane is built by Massachusetts. This work includes constructing the structural box for the fourth lane and covering it with humus and grass seed; this will not be paved as four lanes at the border. Completing this structural box work now limits work in the future that could adversely impact traffic flow and the environment. This is the last segment to be widened in the area, and will tie into previously constructed improvements in the Exit 1 area. The primary focus of the project is to address deteriorated pavement conditions, guardrail and drainage. This work will be accompanied by the construction of the last soundwall on the corridor, which is part of the environmental commitments for the project.

PROJECT FACT SHEET

PROJECT FACTS	13933A
Est. Advertise Date:	Spring 2019
Est. Start Construction Date:	Summer 2019
Est. Completion Date:	Fall 2020
Total Est. Construction Cost: (bid plus inspection, testing, oversight, etc.)	\$18.5M
Contractor:	Not yet advertised.

Updated: 1-24-19
